

If not now, **when?**

RWC Equity Income

Introduction

In thirty years of running money, I have witnessed two occasions in which a popular narrative has caused investors to favour one group of companies over another to such a degree that the valuation spread between the loved and unloved companies presented contrarian investors with the opportunity to lock in returns for the several years that followed. The first was the hysteria that swept through markets during the Technology Media Telecoms (TMT) boom of the late nineties, the second was the real estate and commodity boom that preceded

the Great Financial Crisis in 2008. I believe that we are now witnessing the third such opportunity as a fear of a global economic downturn and a view that central bankers will be able to continue to suppress interest rates for an extended period has driven investors in to quality growth companies and out of financials and cyclicals. The valuation spread this has created between these two groups now matches that witnessed in 2000 and 2008 (top chart of figure 1) which set up periods of fantastic returns for value stocks (bottom chart figure 1).

No investment strategy or risk management technique can guarantee returns or eliminate risks in any market environment.

In a desert of over-valued assets, UK equities could represent an oasis of opportunity

Central bank policy for the last ten years has promoted risk taking in all asset classes that has produced what some have referred to as 'The Everything Bubble'. While we would agree that most asset classes look expensive, there are still a few areas which we believe are cheap relative to their history and to other asset classes; UK equities is one area that stands out. Global investors have been allocating away from UK equities for several years possibly over fears about the negative economic

implications of a No-deal Brexit on an index which is heavily weighted towards financials and cyclicals and under weight growth sectors such as Technology. Irrespective of the reason, this constant selling pressure has left UK equities at the biggest discount to World equities for twenty eight years (Figure 2). If you still believe that low starting valuations tend to be correlated with high future returns, you should see this as an opportunity not a threat.

No investment strategy or risk management technique can guarantee returns or eliminate risks in any market environment.

Value stocks are another area of opportunity

Another area of opportunity are value stocks. Figure 3 shows the long run performance of value whilst also highlighting the three largest drawdowns in the strategy since 1993. Note that the first two of these drawdowns preceded the events to which I referred above and were

followed by periods of substantial value outperformance, whilst the third has occurred in the last couple of years. Indeed, three of the worst months for value in the last thirty years have occurred in 2019.

FIGURE 3: LONG-RUN VALUE PERFORMANCE

Sources: QMA, Universe = Russell 3000 Index, 31 August 2019

1. QMA composite value factor, where a factor spread has been computed on returns on a monthly basis. Specifically, each month the universe is sorted into thirds. The top third represents the stocks with factor attributes expected to produce the highest return in the future, and the lowest third the stocks with factor attributes expected to produce the lowest return in the future. The equal weighted return of stocks in each tercile is computed. The spread return is the difference in return between tercile 1 and tercile 3.

Past performance is not a guide to the future. The price of investments and the income from them may fall as well as rise and investors may not get back the full amount invested. No investment strategy or risk management technique can guarantee returns or eliminate risks in any market environment.

Again, this continued selling pressure on value stocks has, we believe, created an opportunity for those willing to take the other side of the trade. Value currently stands

at the same discount to growth that it stood on in 1999 (Figure 4) and from which level it posted considerable returns.

Why has value done badly?

We are frequently asked why value has done badly in recent years and the honest answer is that we don't know for sure, but our best guesses are as follows.

- Lower interest rates favour long duration assets (growth stocks) over short duration assets (value stocks)?
- Belief that disrupters will triumph over disrupted (eventually there will be only one retailer left in the world and it's called Amazon)?
- Herding and fear of missing out (everyone recognises the huge disparity in valuation between value and growth, but they are waiting for their competitors to move first for fear of running against the herd and getting trampled)?

- Fears of economic slowdown or hard Brexit which favour defensives?

Investors need to recognise that the factors above may well be the narrative that has created today's dislocation (today's version of the late nineties' TMT bubble). Even if these predictions are correct, there is a strong likelihood that they have already been priced in, in which case no excess return should be expected. If they are wrong, then we could see returns from value stocks exceed those of growth stocks significantly given the lopsided positioning in which most investors appear to be over-exposed to quality growth and under-exposed to value.

No investment strategy or risk management technique can guarantee returns or eliminate risks in any market environment.

But won't value stocks do badly in a recession?

Probably the push back we receive most often from investors is the perception that our stocks will do badly in the event of a recession. Our riposte to this is as follows.

1. What will happen to them if there isn't a recession?
Value stocks have already been priced for a recession. For example: the RBS share price has recently responded positively to market news (Figure 5).

Many investors seem to be positioned for economic Armageddon by holding predominantly bonds and bond proxies and will be therefore be pointing completely the wrong way if it doesn't happen. Value stocks can almost be thought of as a hedge on the non-zero probability of the economy doing better than expected.

2. What if we are already in a recession? Recessions can only be identified after the event whereas the stock market is a discounting mechanism and looks forward. As UK GDP contracted by 0.2% in the second quarter of 2019, we are one negative quarter away from it being declared that we are in recession and share prices will have once again successfully anticipated this. Since the market usually looks forward, however, it may well be that the trough for cyclicals has already passed as they now begin to discount the recovery.

3. Maybe the expected outperformance of defensives over cyclicals has happened already? Conventional wisdom is that consumer staples do well in an economic decline and cyclicals do badly. However, I am not convinced that this necessarily holds from today's starting point with some cyclicals having lost 70-80% of their value leaving them on P/Es of 6-10x and dividend yields of 5-8% whilst consumer staples sit on P/Es of 25x and dividend yields of 2%. Arguably 'the recession' has been priced in already – Is it realistic to expect them to keep falling once a recession is confirmed?
4. Do you genuinely believe you can call the turning point to the day or week? If you think a stock is worth 220p and the share price is 100p, isn't the most important factor that there is potentially 120% of upside? Yes, it might go there via 80p but alternatively it might not.

Past performance is not a guide to the future. The price of investments and the income from them may fall as well as rise and investors may not get back the full amount invested. No investment strategy or risk management technique can guarantee returns or eliminate risks in any market environment. The names shown above are for illustrative purposes only and is not intended to be, and should not be interpreted as, recommendations or advice.

Should you position before or after the turn?

Some investors seem to be waiting for front page of the Financial Times to tell them that a regime change has occurred and that it is now time to start selling quality growth and buying value stocks. In my experience, life is not that simple or as the expression goes 'nobody rings a bell at the top'.

Frequently there is no catalyst and the regime change only become apparent after the event. The problem this creates is that waiting for it to become apparent usually means missing out on a significant part of the gains.

When valuation dispersions are as extreme as they are today, they are like a stretched rubber band and tend to snap back very quickly and hence it is crucial to position before the turn if you want to capture the gains.

Conclusion

We understand more than most that value investing is behaviourally difficult (James Montier once described it as like having your arm repeatedly broken) and hence we can completely sympathise with those who don't want to put all their assets in to a value strategy. Having identified some of the multi decade extremes in the previous pages, however, we find it hard to see why those who have the significant bulk of their money in quality growth stocks which have done very well and now look very expensive can't see any merit in at least moving a portion of this back to value. The case for this type of hedge strikes us as very compelling.

Unless stated otherwise, all opinions within this document are those of the RWC Equity Income investment team, as at 22nd October 2019.

The names shown above are for illustrative purposes only and are not intended to be, and should not be interpreted as, recommendations or advice.

Past performance is not a guide to the future. The price of investments and the income from them may fall as well as rise and investors may not get back the full amount invested. No investment strategy or risk management technique can guarantee returns or eliminate risks in any market environment.

The term "RWC" may include any one or more RWC branded entities including RWC Partners Limited and RWC Asset Management LLP, each of which is authorised and regulated by the UK Financial Conduct Authority and, in the case of RWC Asset Management LLP, the US Securities and Exchange Commission; RWC Asset Advisors (US) LLC, which is registered with the US Securities and Exchange Commission; and RWC Singapore (Pte) Limited, which is licensed as a Licensed Fund Management Company by the Monetary Authority of Singapore.

RWC may act as investment manager or adviser, or otherwise provide services, to more than one product pursuing a similar investment strategy or focus to the product detailed in this document. RWC seeks to minimise any conflicts of interest, and endeavours to act at all times in accordance with its legal and regulatory obligations as well as its own policies and codes of conduct.

This document is directed only at professional, institutional, wholesale or qualified investors. The services provided by RWC are available only to such persons. It is not intended for distribution to and should not be relied on by any person who would qualify as a retail or individual investor in any jurisdiction or for distribution to, or use by, any person or entity in any jurisdiction where such distribution or use would be contrary to local law or regulation.

This document has been prepared for general information purposes only and has not been delivered for registration in any jurisdiction nor has its content been reviewed or approved by any regulatory authority in any jurisdiction. The information contained herein does not constitute: (i) a binding legal agreement; (ii) legal, regulatory, tax, accounting or other advice; (iii) an offer, recommendation or solicitation to buy or sell shares in any fund, security, commodity, financial instrument or derivative linked to, or otherwise included in a portfolio managed or advised by RWC; or (iv) an offer to enter into any other transaction whatsoever (each a "Transaction"). No representations and/or warranties are made that the information contained herein is either up to date and/or accurate and is not intended to be used or relied upon by any counterparty, investor or any other third party.

RWC uses information from third party vendors, such as statistical and other data, that it believes to be reliable. However, the accuracy of this data, which may be used to calculate results or otherwise compile data that finds its way over time into RWC research data stored on its systems, is not guaranteed. If such information is not accurate, some of the conclusions reached or statements made may be adversely affected. RWC bears no responsibility for your investment research and/or investment decisions and you should consult your own lawyer, accountant, tax adviser or other professional adviser before entering into any Transaction. Any opinion expressed herein, which may be subjective in nature, may not be shared by all directors, officers, employees, or representatives of RWC and may be subject to change without notice. RWC is not liable for any decisions made or actions or inactions taken by you or others based on the contents of this document and neither RWC nor any of its directors, officers, employees, or representatives (including affiliates) accepts any liability whatsoever for any errors and/or omissions or for any direct, indirect, special, incidental, or consequential loss, damages, or expenses of any kind howsoever arising from the use of, or reliance on, any information contained herein.

Information contained in this document should not be viewed as indicative of future results. Past performance of any Transaction is not indicative of future results. The value of investments can go down as well as up. Certain assumptions and forward looking statements may have been made either for modelling purposes, to simplify the presentation and/or calculation of any projections or estimates contained herein and RWC does not represent that that any such assumptions or statements will reflect actual future events or that all assumptions have been considered or stated. Forward-looking statements are inherently uncertain, and changing factors such as those affecting the markets generally, or those affecting particular industries or issuers, may cause results to differ from those discussed. Accordingly, there can be no assurance that estimated returns or projections will be realised or that actual returns or performance results will not materially differ from those estimated herein. Some of the information contained in this document may be aggregated data of Transactions executed by RWC that has been compiled so as not to identify the underlying Transactions of any particular customer.

The information transmitted is intended only for the person or entity to which it has been given and may contain confidential and/or privileged material. In accepting receipt of the information transmitted you agree that you and/or your affiliates, partners, directors, officers and employees, as applicable, will keep all information strictly confidential. Any review, retransmission, dissemination or other use of, or taking of any action in reliance upon, this information is prohibited. The information contained herein is confidential and is intended for the exclusive use of the intended recipient(s) to which this document has been provided. Any distribution or reproduction of this document is not authorised and is prohibited without the express written consent of RWC or any of its affiliates.

Changes in rates of exchange may cause the value of such investments to fluctuate. An investor may not be able to get back the amount invested and the loss on realisation may be very high and could result in a substantial or complete loss of the investment. In addition, an investor who realises their investment in a RWC-managed fund after a short period may not realise the amount originally invested as a result of charges made on the issue and/or redemption of such investment. The value of such interests for the purposes of purchases may differ from their value for the purpose of redemptions. No representations or warranties of any kind are intended or should be inferred with respect to the economic return from, or the tax consequences of, an investment in a RWC-managed fund. Current tax levels and reliefs may change. Depending on individual circumstances, this may affect investment returns. Nothing in this document constitutes advice on the merits of buying or selling a particular investment. This document expresses no views as to the suitability or appropriateness of the fund or any other investments described herein to the individual circumstances of any recipient.

AIFMD and Distribution in the European Economic Area ("EEA")

The Alternative Fund Managers Directive (Directive 2011/61/EU) ("AIFMD") is a regulatory regime which came into full effect in the EEA on 22 July 2014. RWC Asset Management LLP is an Alternative Investment Fund Manager (an "AIFM") to certain funds managed by it (each an "AIF"). The AIFM is required to make available to investors certain prescribed information prior to their investment in an AIF. The majority of the prescribed information is contained in the latest Offering Document of the AIF. The remainder of the prescribed information is contained in the relevant AIF's annual report and accounts. All of the information is provided in accordance with the AIFMD.

In relation to each member state of the EEA (each a "Member State"), this document may only be distributed and shares in a RWC fund ("Shares") may only be offered and placed to the extent that (a) the relevant RWC fund is permitted to be marketed to professional investors in accordance with the AIFMD (as implemented into the local law/regulation of the relevant Member State); or (b) this document may otherwise be lawfully distributed and the Shares may lawfully offered or placed in that Member State (including at the initiative of the investor).

Information Required for Distribution of Foreign Collective Investment Schemes to Qualified Investors in Switzerland

The representative and paying agent of the RWC-managed funds in Switzerland (the "Representative in Switzerland") is Société Générale, Paris, Zurich Branch, Talacker 50, P.O. Box 5070, CH-8021 Zurich. In respect of the units of the RWC-managed funds distributed in Switzerland, the place of performance and jurisdiction is at the registered office of the Representative in Switzerland.
